Pourable Crack Filler

*...For positive, tight,
long lasting sealing of
pavement cracks*

Cracks Destroy Paved Surfaces

Parking lots and other traffic, landscape and recreational areas represent a considerable investment for most property owners and municipalities. To get full value from these investments, proper attention to maintenance is essential.

Cracks and weathered, shrunken expansion joints are two forms of deterioration that require immediate attention. They allow moisture to seep underneath the pavement where it becomes the source of erosion and freeze-thaw damage. Eventually, water penetrating through cracks causes pot holes, chuck holes and, in severe freeze areas, buckling of the pavement. Left to their natural course, these

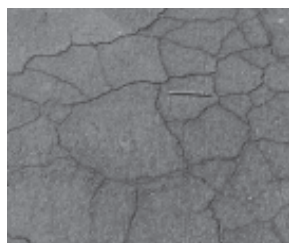

SWEPACO Pourable Crack Filler is the simple solution for fast, effective sealing of cracks in asphalt and concrete pavement.

problems can quickly turn an investment into a liability or totally destroy a sizeable investment.

Superior “Elastomer Modified” Formula

There is a quick, almost effortless solution to cracking of asphalt and concrete pavement ... a way to positively seal pavement cracks as soon as they develop without time consuming preparation or application. And that solution is SWEPACO Pourable Crack Filler.

Left unsealed, cracks can destroy pavement . . .

Without sealing, small cracks can destroy pavement by allowing water to erode the subgrade. Sealing with SWEPACO Pourable Crack Filler is the simple solution.

Pourable Crack Filler is an “elastomer modified” asphalt crack filler in liquid form. The formula starts with SWEPCO’s premium quality “Heart of Texas” Asphalt®, especially selected and refined for outstanding flexibility, bondability and weather resistance. This premium quality asphalt is then chemically modified with an elastomeric polymer, producing a “rubber like” product with superior elasticity, elongation, tensile strength and pliability.

Pourable Crack Filler will stretch to more than 3 times its original size without rupturing, but will readily spring back to within 10% of its original shape. Even as flexible as it is, it is also exceptionally strong, having a tensile strength of more than 200 PSI. And it maintains its flexibility and strength even at temperatures below 0°F(-17.8°C).

Positive, Tight, Long Lasting Sealing Action

Pourable Crack Filler expands as it cures in the crack, so it wedges itself into the crack forming a tight weatherproof seal. And because it has “rubber like” properties, it compresses and expands as the pavement expands and contracts. It won’t harden, shrink, dry out or crack like conventional crack fillers made with ordinary asphalts. It stays flexible, to keep cracks and joints sealed.

Easy, Fast Application

Pourable Crack Filler comes in liquid form that makes application quick and simple. No pre-heating, no caulking guns or other time-consuming application methods. Simply mix the two parts together and pour it into the crack. Quick, positive sealing is the result. And it cures quickly, too, so there’s no prolonged disruption of traffic flow.

Prolongs Pavement Life & Reduces Maintenance Costs

Sealing cracks and joints with Pourable Crack Filler prolongs the life and appearance of pavement. Properly sealed cracks prevent pot holes, chuck holes and pavement buckling caused by moisture penetration. So the pavement lasts longer and looks better.

And Pourable Crack Filler also reduces pavement maintenance. Because it helps prevent pavement deterioration, it saves time and reduces maintenance expense. Protect your pavement investment today ... the simple way ... with Pourable Crack Filler.

Application Information

SWEPCO provides simplified step-by-step written instructions that are easy to follow with each order.

Pourable Crack Filler is available in cases of five one-gallon (3.79-liter) containers and 5-gallon (19-liter) pails.

One gallon (3.79 liters) fills approximately 75 feet (22.5 m) of one-half inch by one-half inch (1.3 cm by 1.3 cm) cracks.
